Jeff,

Regarding our recent phone conversation and your request for flood elevation certificate (see attached) as required for permit #BU-04-1638, a restroom facility (Building 15) for FPS Inc., we submit the following statement.

The facility has been constructed of reinforced Concrete Masonry Units (CMU) on a poured foundation and reinforced concrete slab. All electrical outlets, switches, heaters, thermostat controls and all other electrical equipment and or connections are at an elevation exceeding the established 177 ft flood elevation requirement. Electrical wiring runs are of metal conduit and surface mounted metal boxes. Fixtures are porcelain, fiberglass or stainless steel. Ingress and egress doors and jambs are constructed of steel with 2ft by 2ft metal vents installed in the bottom half of each door that would allow free flow of water in the event of flood conditions exceeding floor elevation.

This facility has been built to withstand flood conditions without damage to the structure or its equipment.

Sincerely,

Edward R. Atkinson
Project Manager
