INTRODUCTION

Purpose and Need

Loowit Consulting Group, LLC (LCG) was retained by RB Engineering, Inc. (Applicant) to complete a critical areas investigation and report on a commercial property located at 1820 N. National Ave in Chehalis, Washington (Figure 1 & 2). LCG investigated wetland areas and applied jurisdictional buffers according to code requirements by the City of Chehalis. Access to the site is via driveway aprons off N. National Ave to the west and NE Median St to the south.

Future development at the subject site will require compliance with critical areas regulations under *Chehalis Municipal Code (CMC) Title 17, Division III: Environmental Districts.*

Site Description

The subject site consists of a two lots totaling approximately 0.95 acre of vacant property.

Subject site specifics include:

Site Address:	1820 N. National Ave, Chehalis, WA (Table 1)
<u>Current Owner</u> :	Lewis Public Transportation Area
Tax Parcel Number:	See Table 1
Legal Description:	Section 20, Township 14 North, Range 2 West, W.M.
Property Size:	Approximately 0.95 acre
Jurisdiction:	City of Chehalis

Table 1: Summary of Subject Site

Parcel #	Address	City		Size (acres)
005605100003	1820 N. National Ave	Chehalis		0.46
005605100004	No address	No address Chehalis		0.49
			Total	0.95

The subject site is located at 1820 N. National Ave in the northern portion of Chehalis, Washington (Figure 1) and has been previously used for commercial purposes. Existing driveways, parking lots, foundations, and building slabs are present at the site although no buildings are present. The subject site is situated on a flat historic fill pad with an earthen berm located along the northern property boundary (Photograph 1). Access to the subject site is via asphalted aprons from N. National Ave and NE Median St (Photograph 2).

Photograph 1: Subject site looking south from the edge of the earthen berm along the north property boundary.

Photograph 2: Site access from N. National Ave on the right, subject site on the left. Looking south.

Land uses adjacent to the subject site include:

• To the South – Commercial

- To the North Open space
- To the West N. National Ave and commercial
- To the East Commercial

METHODS

Desktop Review

Prior to visiting the subject site, LCG conducted a desktop review of readily available mapping resources and other pertinent information including:

- Lewis County Web Map (<u>http://ims.lewiscountywa.gov/webmaps/composite2/viewer.htm</u>).This source provided parcel information, aerial photographs, physical attributes, and other information from the Lewis County Assessor.
- Federal Emergency Management Agency. Flood Map Service Center. (<u>https://msc.fema.gov/portal/search</u>) This site includes updated flood maps for the United States.
- Google Earth Pro (<u>https://www.google.com/earth/</u>) This source provided recent and past aerial photographs of the project area.
- US Fish and Wildlife Service National Wetlands Inventory Wetlands Mapper (<u>https://www.fws.gov/wetlands/data/mapper.html</u>). This mapping source depicts wetlands and streams throughout the United States.
- US Department of Agriculture Natural Resources Conservation Service Web Soil Survey (<u>https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx</u>). This source depicts mapped soils including hydric soils throughout the United States.
- Washington Department of Natural Resources Forest Practices Application Mapping Tool (<u>https://fpamt.dnr.wa.gov/default.aspx</u>). This mapping source depicts streams and wetlands in Washington State.
- Washington Department of Natural Resources Geologic Information Portal. (<u>https://www.dnr.wa.gov/programs-and-services/geology/geologic-hazards/landslides#find-mapped-landslides</u>). This site maps known geologic hazard areas in Washington State.
- Washington Department of Fish and Wildlife Salmonscape (<u>http://apps.wdfw.wa.gov/salmonscape/map.html</u>). This mapping source depicts streams and fish distribution in Washington State.
- Washington Department of Fish and Wildlife Priority Habitat and Species (<u>http://apps.wdfw.wa.gov/phsontheweb/</u>). This mapping source depicts priority habitats and species throughout Washington State.

State Regulations

Wetlands are regulated by Washington Department of Ecology (Ecology) under the Water Pollution Control Act and the Shoreline Management Act. The State Environmental Policy Act (SEPA) process is also used to identify potential wetland-related concerns early in the permitting process. All proposed direct and identified indirect impacts to wetlands are reviewed and approved/denied by Ecology using the regulations previously listed.

Streams are regulated by Washington Department of Fish and Wildlife under the State Hydraulic Code, Chapter 77.55 Revised Code of Washington. Projects involving activities within, over, or beneath jurisdictional streams are subject to the Hydraulic Project Approval (HPA) permitting process administered by WDFW.

Federal Regulations

Wetlands are regulated as "waters of the United States" under Section 404 of the Clean Water Act. Section 404 regulations are administered by the US Army Corps of Engineers (USACE).

Local Regulations

Critical Areas are regulated by *City of Chehalis Municipal Code (CMC) Title 17, Division III: Environmental Districts*.

Field Investigations

On February 27, 2020, LCG collected site information, delineated jurisdictional wetlands, and verified site conditions. Weather conditions at the time of site investigation were clear (60°F) with 0.0 inches of precipitation the day of field work. Recorded weather history from the Washington State University Weather Station in Chehalis, Washington two weeks prior to visiting the site is characterized by high temperatures ranging from 43.4 to 58.7°F and low temperatures ranging from 24.5 to 39.8°F. Total recorded precipitation two weeks prior to the site visit (February 13th to 26th) was recorded at 1.29 inches (Table 2, Appendix C).

Table 2: Daily Weather Data Summary at Chehalis Weather Station - Chehalis, Washington.Washington State University AgWeatherNet (Appendix C)

Date	Minimum Temp (Deg F)	Maximum Temp (Deg F)	Total Precipitation (in)
2/13/2020	33.1	44.1	0.12
2/14/2020	38	47.7	0.14
2/15/2020	39.1	43.4	0.55
2/16/2020	33.6	47.3	0.05
2/17/2020	30.8	50.5	0
2/18/2020	30.5	49.2	0
2/19/2020	24.7	55.7	0
2/20/2020	24.5	58.7	0
2/21/2020	27.2	57.6	0
2/22/2020	31.8	51.4	0
2/23/2020	39.8	47.4	0.42
2/24/2020	32.7	48.3	0

2/25/2020	30.1	52.7	0.01
2/26/2020	35.6	54.9	0
		Total	1.29
2/27/2020	31	61.5	0

Site investigation work tasks included:

- Documentation of current site conditions
- Documentation of adjacent land uses
- Delineation of wetlands
- Documentation of wetland/upland conditions with Test Plots
- Collection of site photographs

Wetlands were delineated according to methods outlined in the U.S. Army Corps of Engineers, 2010, *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region (Version 2.0)*. Data documenting vegetation, soils, and hydrology were collected and used to determine wetland and uplands at the site (Appendix A). Wetland boundaries were delineated using documented test plots and subsequently surveyed by LCG using GPS equipment with a horizontal accuracy of ± 11 feet.

Vegetation

Vegetation at the site is comprised of invasive species and a few native trees and shrubs. Table 3 summarizes wetland and upland vegetation observed at the subject site.

Scientific Name	Common Name	Wetland Indicator Code
Alnus rubra	Red Alder	FAC
Carex obnupta	Slough Sedge	OBL
Phalaris arundinacea	Reed Canary Grass	FACW
Populus balsamifera	Black Cottonwood	FAC
Rubus armeniacus	Himalayan Blackberry	FAC
Salix lasiandra	Pacific Willow	FACW

Table 3: Site Vegetation Observed

Wetland Indicator Code

OBL = Obligate (>99% found in wetlands)

FACW = Facultative Wetland (>67% to 99% found in wetlands)

FAC = Facultative (33% to 67% found in wetlands)

FACU = Facultative Upland (1% to <33% found in wetlands)

UPL = Obligate Upland (<1% found in wetlands)

Soils

According to the US Department of Agriculture Natural Resources Conservation Service (NRCS) Web Soil Survey for Lewis County, soils at the subject site are mapped as (Table 4 & Figure 4):

Table 4: Soil Summary.

Soil #	Soil Name	Slope %	Hydric %	
247	Xerorthents, spoils	0-20	0	

Historic land disturbance activities including general grading and filling have historically altered natural soil conditions at the site resulting in soils that may be somewhat different than those mapped by NRCS.

Hydrology

The subject site is situated on a fill pad within a floodplain area associated with Salzer Creek and the Chehalis River. A larger wetland area north of the subject site collects surface water before it discharges to maintained drainage ditches along N. National Ave. There are no mapped streams within or adjacent to the subject site (Figure 6).

Mapping

Wetland boundary flagging, roads, property boundaries, and other site features were derived from public sources and augmented with survey data from Foresight Surveying, Inc. and GPS points collected by LCG, LLC using portable GPS equipment with a horizontal accuracy of ± 11 feet.

The National Wetlands Inventory Map (Figure 5) identifies a Palustrine Emergent (PEM) wetland north of the subject site.

RESULTS and DISCUSSION

Wetlands

A single wetland area (Wetland "A") was located and delineated immediately north of the subject site within a historic floodplain area of Salzer Creek and the Chehalis River (Figure 1). Wetland areas were delineated using vegetation, soil, and hydrology data gathered from paired plots contained in Appendix A.

<u>Wetland "A"</u> is an emergent/scrub-shrub/forested depressional wetland (Figure 3) with an improving water quality score of 7, a hydrologic score of 8, and a habitat score of 6 for a total score of 21 resulting in a rating of Category II using the Washington Department of Ecology Rating System for Western Washington, 2014 Update (Table 5 & Appendix B). Wetland "A" is located within a depression area bounded by N. National Ave to the west, a large fill pad to the north, commercial development to the east, and fill pads to the south. The primary sources of hydrology are local run-off and seasonal shallow groundwater. The majority of Wetland "A" is vegetated with invasive reed canary grass with scattered patches of willow, red alder, and black cottonwood.

		Wetland Rating System ^B					Standard

A Hydrogeomorphic Classification

 $^{\rm B}$ Washington State Wetland Rating System for Western Washington: 2014 Update

^C Chehalis Municipal Code (CMC) 17.23.030.C

^D Based on category of wetland and habitat score.

Wetland Buffers

CMC 17.23.030.C requires buffers on all jurisdictional wetlands according to the category of wetland and habitat score (Table 5). Wetland "A" requires a minimum 150-foot wide buffer. The buffer area at the subject site is comprised of historic fill material including soil, rocks, concrete, bricks, and other imported earthen debris. A 4 to 5 foot tall earthen berm is located immediately north of the north property boundary and is vegetated with Himalayan blackberry which are routinely mowed. The remaining portion of the wetland buffer is mostly devoid of vegetation and surfaced with gravel/asphalt/concrete making it non-functional. *CMC 17.23.030. A* exempts areas of buffers that are functionally isolated: "*Buffers shall not include areas that are functionally and effectively disconnected from the wetland by a road or other substantially developed surface of sufficient width and with use characteristics such that buffer functions are not provided." Given that the majority of the on-site buffer is developed and offers little, if any, functional value, it seems prudent that the required 150-foot buffer could be reduced to a width that allows reasonable use of the site while offering adequate protection to the off-site wetland.*

CONCLUSIONS

Development of the subject site into transit hub can be accomplished without significant impact to wetlands or functional wetland buffers (Figure 3). Table 6 summarizes critical areas located at the subject area and the buffer required to protect those areas. Given that the buffer is comprised of historic developments including a fill pad, berm, driveways, parking lots, and building slabs; it appears that *CMC 17.23.030. A* would exempt the developed area from the required 150-foot buffer.

Maps and Figures required to answer questions correctly for Western Washington

Depressional Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	D 1.3, H 1.1, H 1.4	A3
Hydroperiods	D 1.4, H 1.2	A1
Location of outlet (can be added to map of hydroperiods)	D 1.1, D 4.1	A1
Boundary of area within 150 ft of the wetland (can be added to another figure)	D 2.2, D 5.2	A1
Map of the contributing basin	D 4.3, D 5.3	A6
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	A2
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	D 3.1, D 3.2	A4
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	D 3.3	A5

Riverine Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Ponded depressions	R 1.1	
Boundary of area within 150 ft of the wetland (can be added to another figure)	R 2.4	
Plant cover of trees, shrubs, and herbaceous plants	R 1.2, R 4.2	
Width of unit vs. width of stream (can be added to another figure)	R 4.1	
Map of the contributing basin	R 2.2, R 2.3, R 5.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	R 3.1	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	R 3.2, R 3.3	

Lake Fringe Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	L 1.1, L 4.1, H 1.1, H 1.4	
Plant cover of trees, shrubs, and herbaceous plants	L 1.2	
Boundary of area within 150 ft of the wetland (can be added to another figure)	L 2.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	L 3.1, L 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	L 3.3	

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants	S 4.1	
(can be added to another figure)		
Boundary of area within 150 ft of the wetland (can be added to another figure)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

Wetland Rating System for Western WA: 2014 Update Rating Form - Effective January 1, 2015

HGM Classification	n of Wetland	in Western	Washington
---------------------------	--------------	------------	------------

For questions 1 -7, the criteria described must apply to the entire unit being rated. If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

- 1. Are the water levels in the entire unit usually controlled by tides except during floods?
 - ✓ NO go to 2
 YES the wetland class is Tidal Fringe go to 1.1
 - 1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?
 - □ NO Saltwater Tidal Fringe (Estuarine)
 If your wetland can be classified as a Freshwater Tidal Fringe use the forms for Riverine wetlands.
 If it is Saltwater Tidal Fringe it is an Estuarine wetland and is not scored. This method cannot be used to score functions for estuarine wetlands.

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

- ☑ NO go to 3
 If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.
- 3. Does the entire wetland unit meet all of the following criteria?
 - ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
 - At least 30% of the open water area is deeper than 6.6 ft (2 m).
 - ☑ NO go to 4

YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

- 4. Does the entire wetland unit **meet all** of the following criteria?
 - □ The wetland is on a slope (*slope can be very gradual*),
 - The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
 - □ The water leaves the wetland **without being impounded**.
 - ☑ NO go to 5

YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
- The overbank flooding occurs at least once every 2 years.
- ☑ NO go to 6

□ YES - The wetland class is Riverine

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

□ NO - go to 8 □ YES - The wetland class is Depressional

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit	HGM class to
being rated	use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream	Depressional
within boundary of depression	
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other	Treat as
class of freshwater wetland	ESTUARINE

If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLA	NDS	
Water Quality Functions - Indicators that the site functions to im	prove water quality	
D 1.0. Does the site have the potential to improve water quality?		
D 1.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression (QUESTION 7 on key)		
with no surface water leaving it (no outlet).	points = 3	
Wetland has an intermittently flowing stream or ditch, OR highly		
constricted permanently flowing outlet.	points $= 2$	2
\Box Wetland has an unconstricted, or slightly constricted, surface outlet		
that is permanently flowing	points $= 1$	
\Box Wetland is a flat depression (QUESTION 7 on key), whose outlet is		
a permanently flowing ditch.	points = 1	
D 1.2. <u>The soil 2 in below the surface (or duff layer)</u> is true clay or true organic		0
(use NRCS definitions).	Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-sh	rub, and/or	
Forested Cowardin classes):		
Wetland has persistent, ungrazed, plants > 95% of area	points = 5	5
Wetland has persistent, ungrazed, plants > $\frac{1}{2}$ of area	points = 3	5
Wetland has persistent, ungrazed plants $> \frac{1}{10}$ of area	points $= 1$	
Wetland has persistent, ungrazed plants $< 1/10$ of area	points $= 0$	
D 1.4. Characteristics of seasonal ponding or inundation:		
This is the area that is ponded for at least 2 months. See description	in manual.	
Area seasonally ponded is $> \frac{1}{2}$ total area of wetland	points $= 4$	2
Area seasonally ponded is > $\frac{1}{4}$ total area of wetland	points $= 2$	
Area seasonally ponded is $< \frac{1}{4}$ total area of wetland	points $= 0$

DEPRESSIONAL AND FLATS WETLANDS	
Hydrologic Functions - Indicators that the site functions to reduce flooding and stream degra	adation
D 4.0. Does the site have the potential to reduce flooding and erosion?	
D 4.1. Characteristics of surface water outflows from the wetland:	
Wetland is a depression or flat depression with no surface water	
leaving it (no outlet) points = 4	
Wetland has an intermittently flowing stream or ditch, OR highly	0
constricted permanently flowing outlet points = 2	2
Wetland is a flat depression (QUESTION 7 on key), whose outlet is	
a permanently flowing ditch points = 1 Wetland has an unconstricted, or slightly constricted, surface outlet	
that is permanently flowing points = 0	
D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of	
the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the	
deepest part.	
Marks of ponding are 3 ft or more above the surface or bottom of outlet points = 7	
Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet points = 5	3
☑ Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet points = 3	
\Box The wetland is a "headwater" wetland points = 3	
Wetland is flat but has small depressions on the surface that trap water points = 1	
Marks of ponding less than 0.5 ft (6 in) points = 0	
D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of	
upstream basin contributing surface water to the wetland to the area of the wetland unit itself.	
The area of the basin is less than 10 times the area of the unit points = 5	3
The area of the basin is 10 to 100 times the area of the unit $points = 3$	c
The area of the basin is more than 100 times the area of the unit $points = 0$	
Entire wetland is in the Flats class points = 5

These questions apply to wetlands of all HGM classes.	
IABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
1.0. Does the site have the potential to provide habitat?	
H 1.1. Structure of plant community: Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller han 2.5 ac. Add the number of structures checked. □ Aquatic bed 4 structures or more: points = 4 □ Emergent 3 structures: points = 2 □ Scrub-shrub (areas where shrubs have > 30% cover) 2 structures: points = 1 □ Forested (areas where trees have > 30% cover) 1 structure: points = 0 If the unit has a Forested class, check if: 1	2
The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon	
H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods). Permanently flooded or inundated Y seasonally flooded or inundated Y types present: points = 2 Occasionally flooded or inundated Y saturated only Y types present: points = 1 Y Saturated only Y types present: points = 0 Permanently flowing stream or river in, or adjacent to, the wetland Seasonally flowing stream in, or adjacent to, the wetland Y spoints Y spoints Y seasonally flowing stream in, or adjacent to, the wetland Y spoints 	1
1 1.3. Richness of plant species	
Count the number of plant species in the wetland that cover at least 10 ft ² . Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple coosestrife, Canadian thistle f you counted: > 19 species 5 - 19 species points = 1 < 5 species	1
1 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) s high, moderate, low, or none. <i>If you have four or more plant classes or three classes and open</i> water, the rating is always high.	
	2
None = 0 pointsLow = 1 pointModerate = 2 points	
All three diagrams in this row are HIGH = 3 points	

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number</i>	
of points.	
□ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)	
Standing snags (dbh > 4 in) within the wetland	
Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends	
at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at	
least 33 ft (10 m)	3
Stable steep banks of fine material that might be used by beaver or muskrat for denning	
(> 30 degree slope) OR signs of recent beaver activity are present (cut shrubs or trees	
that have not yet weathered where wood is exposed)	
At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas	
that are permanently or seasonally inundated (structures for egg-laying by amphibians)	
□ Invasive plants cover less than 25% of the wetland area in every stratum of plants (see	
H 1.1 for list of strata)	
Total for H 1 Add the points in the boxes above	9

Rating of Site Potential If Score is	: 🗌 15 - 18 = H	✓ 7 - 14 = M □ 0 - 6 = L	Record the rating on the first page
--------------------------------------	-----------------	--------------------------	-------------------------------------

H 2.0. Does the landscape have the potential to support the habitat function of the site?									
H 2.1 Accessible habitat (include only habitat that directly abuts wetland unit).									
Calculate:									
0 % undisturbed habitat + (0 % moderate & low intensity land uses / 2) = 0%	1								
	1								
If total accessible habitat is:	0								
$> \frac{1}{3}$ (33.3%) of 1 km Polygon points = 3	l								
20 - 33% of 1 km Polygon points = 2	1								
10 - 19% of 1 km Polygon points = 1	1								
< 10 % of 1 km Polygon points = 0									
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.									
Calculate:	1								
55 % undisturbed habitat + (0 % moderate & low intensity land uses / 2) = 55%									
	3								
Undisturbed habitat > 50% of Polygon points = 3	U								
Undisturbed habitat 10 - 50% and in 1-3 patches points = 2	1								
Undisturbed habitat 10 - 50% and > 3 patches points = 1	1								
Undisturbed habitat < 10% of 1 km Polygon points = 0									
H 2.3 Land use intensity in 1 km Polygon: If	1								
> 50% of 1 km Polygon is high intensity land use points = (-2)									
\leq 50% of 1km Polygon is high intensity points = 0	L								
Total for H 2 Add the points in the boxes above	3								

Rating of Landscape Potential If Score is: \Box 4 - 6 = H \Box 1 - 3 = M \Box < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policie	es? Choose	
only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria:	points = 2	
It has 3 or more priority habitats within 100 m (see next page)		
It provides habitat for Threatened or Endangered species (any p	lant	
or animal on the state or federal lists)		
It is mapped as a location for an individual WDFW priority specie	es	1
It is a Wetland of High Conservation Value as determined by the		I
Department of Natural Resources		
☐ It has been categorized as an important habitat site in a local or		
regional comprehensive plan, in a Shoreline Master Plan, or in a		
watershed plan		
Site has 1 or 2 priority habitats (listed on next page) with in 100m	points = 1	
Site does not meet any of the criteria above	points $= 0$

WDFW Priority Habitats

<u>Priority habitats listed by WDFW</u> (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

http://wdfw.wa.gov/publications/00165/wdfw00165.pdf_or access the list from here: http://wdfw.wa.gov/conservation/phs/list/

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE**: This question is independent of the land use between the wetland unit and the priority habitat.

- Aspen Stands: Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock.
- □ Old-growth/Mature forests: <u>Old-growth west of Cascade crest</u> Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. <u>Mature forests</u> Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- □ **Oregon White Oak**: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 see web link above*).
- **Riparian**: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- □ Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 see web link above*).
- □ **Instream**: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- □ **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report see web link on previous page*).
- **Caves**: A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- **Cliffs**: Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- □ **Talus**: Homogenous areas of rock rubble ranging in average size 0.5 6.5 ft (0.15 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland	Туре	Category
	any criteria that apply to the wetland. List the category when the appropriate criteria are met.	
SC 1.0. I	Estuarine Wetlands	
	Does the wetland meet the following criteria for Estuarine wetlands?	
	The dominant water regime is tidal, Vegetated, and	
	With a salinity greater than 0.5 ppt	
	\Box Yes - Go to SC 1.1 \Box No = Not an estuarine wetland	
SC 1.1.	Is the wetland within a National Wildlife Refuge, National Park, National Estuary	
00 1.1.	Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific	
	Reserve designated under WAC 332-30-151?	
	$\Box \text{ Yes} = \text{Category I} \qquad \Box \text{ No - Go to SC 1.2}$	
SC 1.2.	Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions?	
	The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing,	
	and has less than 10% cover of non-native plant species. (If non-native species are	
	Spartina, see page 25)	
	At least ³ / ₄ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-	
	grazed or un-mowed grassland.	
	The wetland has at least two of the following features: tidal channels, depressions with	
	open water, or contiguous freshwater wetlands.	
	□ Yes = Category I □ No = Category II	
	Netlands of High Conservation Value (WHCV)	
SC 2.1.	Has the WA Department of Natural Resources updated their website to include the list	
	of Wetlands of High Conservation Value?	
	☐ Yes - Go to SC 2.2	
SC 2.2.	Is the wetland listed on the WDNR database as a Wetland of High Conservation Value?	
	□ Yes = Category I □ No = Not WHCV	
SC 2.3.	Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland?	
	http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf	
00.04	$\Box \text{ Yes - Contact WNHP/WDNR and to SC 2.4} \qquad \Box \text{ No = Not WHCV}$	
SC 2.4.	Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation	
	Value and listed it on their website?	
<u> </u>	□ Yes = Category I □ No = Not WHCV	
SC 3.0. I	Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation	
	in bogs? Use the key below. If you answer YES you will still need to rate the	
	wetland based on its functions.	
SC 3.1.	Does an area within the wetland unit have organic soil horizons, either peats or mucks,	
00 0.1.	that compose 16 in or more of the first 32 in of the soil profile?	
	☐ Yes - Go to SC 3.3 ☑ No - Go to SC 3.2	
SC 3.2.	Does an area within the wetland unit have organic soils, either peats or mucks, that are	
	less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic	
	ash, or that are floating on top of a lake or pond?	
	\Box Yes - Go to SC 3.3 \Box No = Is not a bog	
SC 3.3.	Does an area with peats or mucks have more than 70% cover of mosses at ground	
	level, AND at least a 30% cover of plant species listed in Table 4?	
	\Box Yes = Is a Category I bog \Box No - Go to SC 3.4	
	NOTE : If you are uncertain about the extent of mosses in the understory, you may	
	substitute that criterion by measuring the pH of the water that seeps into a hole dug at	
	least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present,	
	the wetland is a bog.	
SC 3.4.	Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir,	
	western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann	
	spruce, or western white pine, AND any of the species (or combination of species) listed	
	in Table 4 provide more than 30% of the cover under the canopy?	
	□ Yes = Is a Category I bog □ No = Is not a bog	

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? If you answer YES you will still need to rate the wetland based on its functions. Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = Category I No = Not a forested wetland for this section SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the bottom) Yes - Go to SC 5.1 No = Not a wetland in a coastal lagoon SC 5.1. Does the wetland meet all of the following three conditions? The wetland in elatively undisturbed (has no diking, diking, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species no p. 100 A tleast % of the landward edge	SC 4.0. Forested Wetlands	
criteria for the WA Department of Fish and Wildlife's forests as priority habitats? If you answer YES you will still need to rate the wetland based on its functions. Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = Category I No = Not a forested wetland for this section SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 pp) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>) Yes - Go to SC 5.1 No = Not a wetland in a coastal lagoon SC 5.1. Does the wetland head of the following three conditions? The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). A tleast 3/ of the landward edge of the wetland has a 100 th buffer of shrub, forest, or ungrazed or un-mowed grassland. The wetland is larger than ¹ / ₁₀		
answer YES you will still need to rate the wetland based on its functions. ○ Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. ○ Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years of 30 CR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). ○ Yes = Category I ○ No = Not a forested wetland for this section SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? ○ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks ○ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>) ○ Yes - Go to S C 5.1 ○ No = Not a wetland in a coastal lagoon SC 5.1. Does the wetland meet all of the following three conditions? The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). ○ K 16 asat 3/ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland. ○ The wetland is larger		
Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Stature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Stature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species on adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks The wetland lies in a depression adjacent to marine waters that is saline or brackish (> 0.5 pt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>) (S 1. Does the wetland meet all of the following three conditions? The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). A tleast ¾ of the laße line (also called the Western Boundary of Upland Ownership or WBUO)? If you answer yees you will still need to rate the wetland based on its habitat functions. In practical terms that means the following geographic areas: Long Beach Peninsula: Lands west of SR 103 G cayland-Westport: Lands we		
forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (31 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = Category 1 No = Not a forested wetland for this section SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 pt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>) Yes - Go to SC 5.1 No = Not a wetland in a coastal lagoon SC 5.1.
