Re: Wetland and Aquatic Assessment at 215 N Hamilton Road

Parcel Numbers: 017896006009, 017896006010, 017897017000, 017896006011, 017896006016, 017909002003, 017909002004

Dear Ms. Baraconi,

RB Engineering and Mr. Rusty Gill asked me to complete a Wetland and Aquatic Assessment for the seven (7) parcels listed above, five (5) of which are proposed for industrial development (Appendix A). These seven (7) parcels total 45 acres and have been used for both mining and material handling for decades. However, the owner has sold the 2 parcels totaling 19 acres on the west side and desires to install three (3) approximately 100,000 sq/ft buildings on 26 acres located on the west side of this complex. A wetland and aquatic assessment are called for as the complex appears to be bisected N-S with potential Critical Areas and a review of NWI maps showed that associated wetlands could be present.

A GIS review showed that five (5) Wetland Reports were submitted between 1998 and 2021 for neighboring properties as shown on **Appendix B**. The parcels highlighted in BLUE with a "X" are neighboring parcels that have a Wetland Report on file. A study of this previous work validates the findings in this report as accurate and consistent with the findings of Wetland Scientists working in this basin since 1998. **Only the 1998 wetland report for 474 Hamilton Road identified and delineated a Cat III wetland; this is the same wetland that is delineated below. The other four (4) Wetland reports do not identify ANY wetlands.** The

properties and reports are listed below; electronic copies will be provided on request or can be obtained from the Lewis County Planning Department.

1998	474 Hamilton Road	017909002003	Findings:	Cat III wetland and disturbed area
2002	370 Hamilton Road	017897025001	Findings:	No Wetlands
2014	0 N Hamilton Road	017896006013	Findings:	No Wetlands, but "ditch on north"
2017	185 N Hamilton Road	017896006013	Findings:	NWI mapping inaccurate
2021	215 N Hamilton Road	017896002000	Findings:	NWI mapping inaccurate

Appendix C shows an updated National Wetlands Inventory map of the site, corrected for deletions to the NWI map reported and documented by previous Wetland Reports from 1998-2021 for this area. It is knowledge of this previous wetland work, combined with a review of current GIS data and numerous site visits that have focused the scope of this wetland report to the 26-acre area shown on Appendix D, and specifically to the Critical Areas that are located along the west property line.

Aquatic Assessment:

Current Conditions:

Site visits were conducted in August and November 2022 to identify and delineate wetlands and aquatic habitat in the 26-acre area shown on **Appendix D**. A GPS generated site plan **(Appendix E)** was generated from data collected on site and a WA Water Typing Worksheet **(Appendix F)** are included. **Segment A** on the worksheet, and shown on the **site plan**, is a Type-F stream (<10' BFW) that empties into the Newaukum River through a 3' concrete culvert under Hamilton Road. **Segment B** is a delineated wetland, and **Segment C** is a non-typed 1000' straight "ditch" that collects surface water runoff from farms and businesses that border Hamilton Road and N Hamilton Road.

Data and results:

Segment A - mapped on the site map as a Type-F, having a bank full width of <10', and by **City** of **Chehalis Code 17.25.030** has a **100' buffer**. This Type-F travels under Hamilton Road through a 3' concrete culvert to the Newaukum River.

Segment B - has been identified, characterized, and delineated using the U.S. Army protocols to be a Cat III wetland with LOW habitat score (5); Chehalis Code 17.23.030 shows an 80' buffer.

Segment C - is an approximately 1000' straight non-typed drainage "ditch", collecting surface water from businesses and farms, running SE to NW, and entering the typed Cat III wetland defined as Segment B above.

Conclusions:

The site map shows, and site visit and WA Water Typing Worksheet (Appendix F) confirm, the existence of a Type-F stream and non-typed ditch running along the west side of the site plan (Appendix E). The Type-F carries a 100' buffer distance (CCC 17.25.030, <10') and the non-typed ditch buffer is 0'.

Wetland Assessment:

Wetland Determination Method

The wetland determination completed by Russell Development followed the Routine Determination Method as per the U.S. Army Corp of Engineers, Wetland Delineation Manual (1987), the 2010 Regional Supplement for Western Mountains, Valleys and Coast Region, as well as the Washington State Wetland Rating System (2014). The Routine Determination Method examines three (3) parameters; vegetation, hydrology, and soils to determine if wetlands exist in a given area. By definition, wetlands are those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands are regulated as "Waters of the United States" by the U.S. Army Corp of Engineers, and locally by the City of Chehalis Critical Area Code 17.21 and Lewis County Critical Areas Code 17.38.

Current Conditions:

The 1.64-acre Wetland was scored a Cat III using the Western WA Wetland Rating System, and the buffer determined to be 80' using CCC 17.23.030 with a Low Habitat score (5). The wetland collects water from businesses and farms along N Hamilton Road and Hamilton Road. This same wetland was identified and delineated as a Cat III wetland in a 1998 Wetland Report completed for 474 Hamilton Road.

Also shown on the site plan is a .93-acre "disturbed" area in the NW corner of the proposed construction site. This disturbed area was also noted in the 1998 Wetland report; it remains a highly disturbed area and is NOT a wetland (**Appendix E & G**). However, a portion of this "disturbed" area is within the 100' buffer of the Type-F stream and will be included in a future mitigation plan.

Data and Results

To confirm the existence of a wetland, and to delineate the wetland boundary, test pits need to be dug and scored using ACE scoresheets. Although the area reviewed in this report is approximately 26-acres, a review of GIS data and existing Wetland Reports for neighboring properties, indicated that many of the wetlands indicated on the NWI map did not exist (Appendix C). During the site visit it was apparent that the only wetland that exists today is the same wetland that was delineated in 1998. Additionally, the west border of the wetland is clearly defined by bare dirt transitioning to the wetland, requiring only one (1) set of pits to delineate the west border. The first **test Pit 1** (Appendix H) was dug in an area suspected to be within the wetland and **Pit 2** outside the wetland (Appendix I). Army Corp Wetland Delineation forms for the Western Mountains, Valleys, and Coast Region were then completed (Appendix J and K) and the data used to identify and mark the wetland boundary with red ribbon. The wetland was then scored using the Western WA Wetland Rating System (2014) (19 points total) which scored the wetland as a Cat III (Appendix L). The 1998 Wetland report also scored this wetland as Cat III.

A visual inspection and GIS review of the neighboring 300' on the west of this site indicates that logistic operations are still taking place, so a site visit was not conducted. It visually appears that much of the information from the 1998 Wetland Report is still current.

Conclusion:

The 1.63-acre wetland indicated on the attached site plan (Appendix E) was scored a Cat III (19 points), with a LOW Habitat score (5) so the buffer required by CCC 17.23.030 is 80'. An 80' buffer is shown on the site plan.

It has been noted on the site plan (Appendix E) that both the Wetland and Aquatic buffers, totalling **2.33 total acres**, have been **HIGHLY** disturbed with little to no vegetation remaining. These buffers will need a **separate mitigation plan per Chehalis Code 17.23.052**.

Buffer Enhancement Recommendations:

The functional values of the existing buffers are relatively low. Downstream riparian buffers consist of formerly disturbed stockpile areas but are well vegetated with perennial grases and some woody species. Opportunities for woody vegetative enhancement on the riparian buffers is limited as those occur mainly under the BPA overhead lines. The weltand buffers are also previously disturbed by grading activity and have been infested for some years with invasive species including Himalayan blackberry, Scotch Broom and Reed Canary grass.

Much of this noxious vegetation has been recently removed which provides an opportunity for enhancement plantings. Buffer enhancement plantings should include a mixture of trees, woody shrubs and groundcovers to provide a fully planted and diverse vegetative condition. Areas nearest the wetland should utilize Obligate or Facultative Wet species including evergreen and deciduous tree species along with large woody shrubs to increase shade. Outer portions of the buffer should include Fac-Wet and FAc-Up species including evergreen and deciduous canopy trees to provide a Shrub-Shrub component supporting habitat. All areas of the buffer should be seeded and permanently stabilized for erosion protection.

Buffer enhancement plantings should be monitored for performance, with contingency specifications for replanting and ongoing maintenance during establishment.

Summary:

After review of GIS data, previously completed Wetland Reports, and a thorough site visit it appears that this proposed industrial site can be constructed without negatively impacting the existing critical areas (Type-F stream and Cat III Wetland) identified. A 100' buffer should be associated with the Type-F stream and an 80' buffer for the Cat III Wetland.

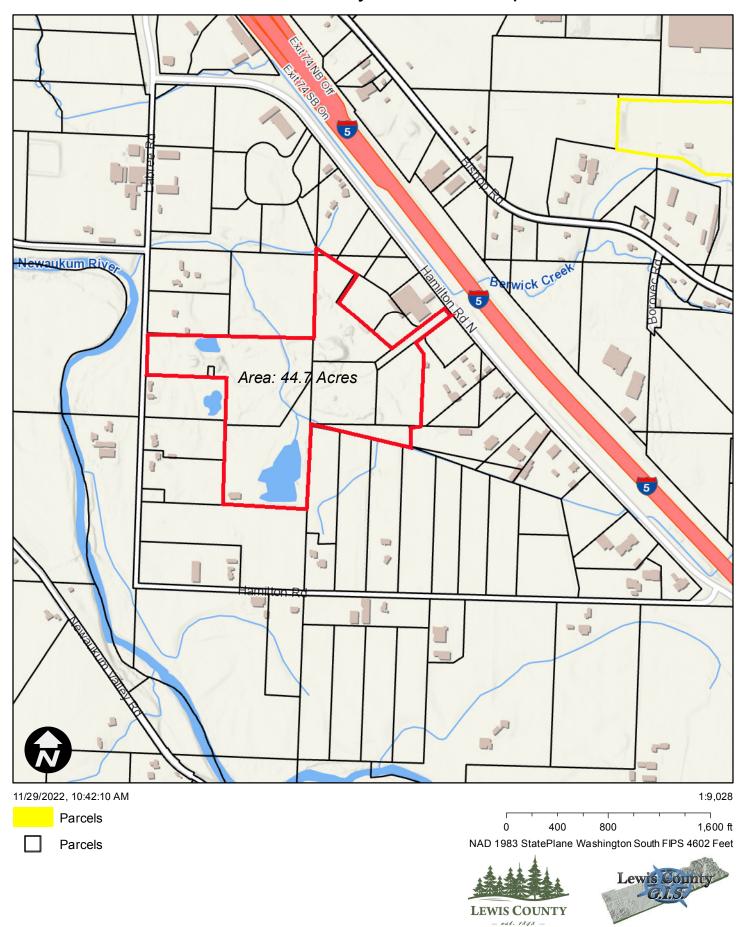

Although the NWI shows a significant array of "potential wetlands" on this site, a review of past Wetland reports, and site visit, confirmed that the only Critical Areas existing on the five (5) parcels included in this report have been addressed.

A separate mitigation needs to be created for the buffers as the soils have been highly disturbed.

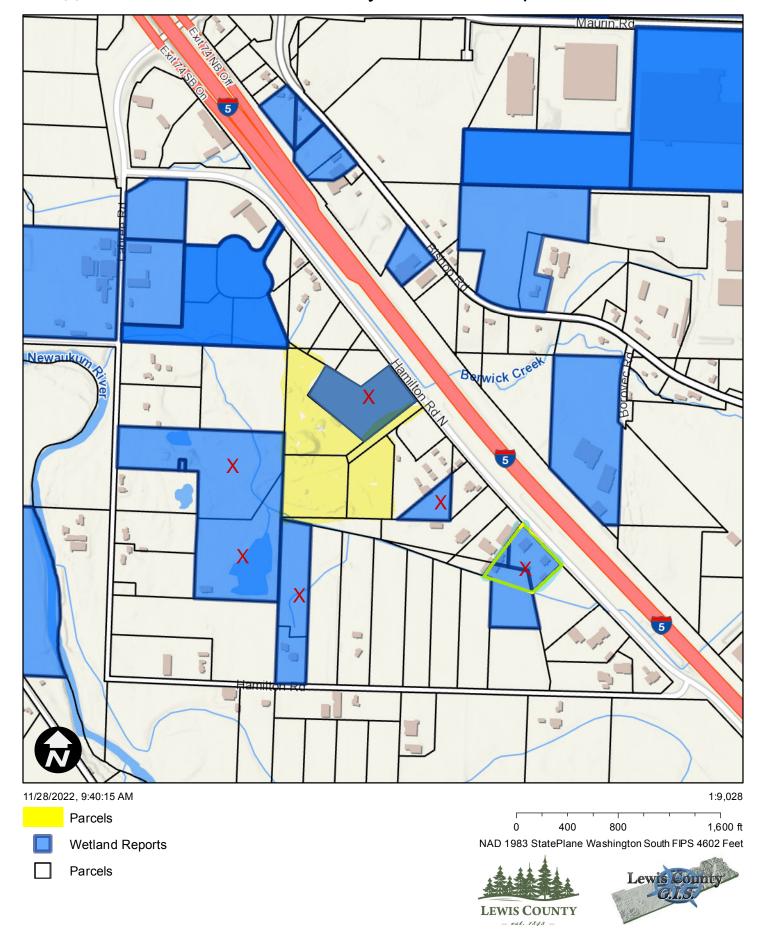

Additional Appendixes:

- M 1 KM Circle; used for Western WA Wetland Scoring.
- N Contour Map of site.

None of the above		

Maps and figures required to answer questions correctly for Western Washington

Depressional Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	D 1.3, H 1.1, H 1.4	
Hydroperiods	D 1.4, H 1.2	
Location of outlet (can be added to map of hydroperiods)	D 1.1, D 4.1	
Boundary of area within 150 ft of the wetland (can be added to another figure)	D 2.2, D 5.2	
Map of the contributing basin	D 4.3, D 5.3	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	D 3.1, D 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	D 3.3	

Riverine Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Ponded depressions	R 1.1	
Boundary of area within 150 ft of the wetland (can be added to another figure)	R 2.4	
Plant cover of trees, shrubs, and herbaceous plants	R 1.2, R 4.2	
Width of unit vs. width of stream (can be added to another figure)	R 4.1	
Map of the contributing basin	R 2.2, R 2.3, R 5.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	R 3.1	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	R 3.2, R 3.3	

Lake Fringe Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	L 1.1, L 4.1, H 1.1, H 1.4	
Plant cover of trees, shrubs, and herbaceous plants	L 1.2	
Boundary of area within 150 ft of the wetland (can be added to another figure)	L 2.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	L 3.1, L 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	L 3.3	

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants	S 4.1	
(can be added to figure above)		
Boundary of 150 ft buffer (can be added to another figure)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat

Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you

probably have a unit with multipl questions 1-7 apply, and go to Que	e HGM classes. In this case, identify which hydrologic criteria in estion 8.
1. Are the water levels in the entir	e unit usually controlled by tides except during floods?
NO go to 2	YES – the wetland class is Tidal Fringe – go to 1.1
1.1 Is the salinity of the water dur	ring periods of annual low flow below 0.5 ppt (parts per thousand)?
	d as a Freshwater Tidal Fringe use the forms for Riverine wetlands. If it n Estuarine wetland and is not scored. This method cannot be used to
The entire wetland unit is flat an and surface water runoff are NC	nd precipitation is the only source (>90%) of water to it. Groundwater OT sources of water to the unit.
NO go to 3 If your wetland can be classified	YES – The wetland class is Flats as a Flats wetland, use the form for Depressional wetlands.
plants on the surface at any t	Leet all of the following criteria? Cland is on the shores of a body of permanent open water (without any time of the year) at least 20 ac (8 ha) in size; er area is deeper than 6.6 ft (2 m).
NO) go to 4	YES - The wetland class is Lake Fringe (Lacustrine Fringe)
seeps. It may flow subsurfac	<u> </u>
NO- go to 5	YES – The wetland class is Slope
-	ond in these type of wetlands except occasionally in very small and nummocks (depressions are usually <3 ft diameter and less than 1 ft

5. Does the entire wetland unit **meet all** of the following criteria?

The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

___The overbank flooding occurs at least once every 2 years.

Wetland name or number __1___

NO go to 6

YES – The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

NO – go to 7

YES The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

NO - go to 8

YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit	HGM class to
being rated	use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream	Depressional
within boundary of depression	
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other	Treat as
class of freshwater wetland	ESTUARINE

If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.

DEPRESSIONAL AND FLATS WETLANDS	
Water Quality Functions - Indicators that the site functions to improve water quality	
D 1.0. Does the site have the potential to improve water quality?	
D 1.1. Characteristics of surface water outflows from the wetland:	
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	
points = 3	
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet. points = 2	
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing points = 1	2
Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch. points = 1	
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions). Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):	
Wetland has persistent, ungrazed, plants > 95% of area points = 5	
Wetland has persistent, ungrazed, plants > ½ of area points = 3	
Wetland has persistent, ungrazed plants $> \frac{1}{10}$ of area points = 1	3
Wetland has persistent, ungrazed plants $<^1/_{10}$ of area points = 0	
D 1.4. Characteristics of seasonal ponding or inundation:	
This is the area that is ponded for at least 2 months. See description in manual.	
Area seasonally ponded is > ½ total area of wetland points = 4	3
Area seasonally ponded is > 1/4 total area of wetland points = 2	
Area seasonally ponded is < ¼ total area of wetland points = 0	_
Total for D 1 Add the points in the boxes above	8
Rating of Site Potential If score is:12-16 = H \underline{X} _6-11 = M0-5 = L Record the rating on the first po	ige
D 2.0. Does the landscape have the potential to support the water quality function of the site?	
D 2.1. Does the wetland unit receive stormwater discharges? Yes = 1 No = 0	1
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants? Yes = 1 No = 0	1
D 2.3. Are there septic systems within 250 ft of the wetland? Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1-D 2.3?	
Source Yes = 1 No = 0	0
Total for D 2 Add the points in the boxes above	2
Rating of Landscape Potential If score is:3 or 4 = HX1 or 2 = M0 = L Record the rating on the fine	rst page
D 3.0. Is the water quality improvement provided by the site valuable to society?	
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list? Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list? Yes = 1 No = 0	0
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)? Yes = 2 No = 0	2
Total for D 3 Add the points in the boxes above	2
Rating of Value If score is: X 2-4 = H 1 = M 0 = L Record the rating on the first page	

DEPRESSIONAL AND FLATS WETLANDS	
Hydrologic Functions - Indicators that the site functions to reduce flooding and stream degradate	ion
D 4.0. Does the site have the potential to reduce flooding and erosion?	
D 4.1. Characteristics of surface water outflows from the wetland:	
Wetland is a depression or flat depression with no surface water leaving it (no outlet) points = 4 Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outletpoints = 2 Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch points = 1 Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing points = 0	2
D 4.2. <u>Depth of storage during wet periods:</u> Estimate the height of ponding above the bottom of the outlet. For wetlands	
with no outlet, measure from the surface of permanent water or if dry, the deepest part. Marks of ponding are 3 ft or more above the surface or bottom of outlet points = 7	
Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet points = 5	
Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet points = 3	3
The wetland is a "headwater" wetland points = 3	
Wetland is flat but has small depressions on the surface that trap water points = 1	
Marks of ponding less than 0.5 ft (6 in) points = 0	
D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin	
contributing surface water to the wetland to the area of the wetland unit itself.	
The area of the basin is less than 10 times the area of the unit points = 5	
The area of the basin is 10 to 100 times the area of the unit points = 3	3
The area of the basin is more than 100 times the area of the unit points = 0	
Entire wetland is in the Flats class points = 5	
Total for D 4 Add the points in the boxes above	8
Rating of Site Potential If score is:12-16 = H \times _6-11 = M0-5 = L Record the rating on the	first page
D 5.0. Does the landscape have the potential to support hydrologic functions of the site?	
D 5.1. Does the wetland receive stormwater discharges? Yes = 1 No = 0	1
D 5.2. Is $>10\%$ of the area within 150 ft of the wetland in land uses that generate excess runoff? Yes = 1 No = 0	1
D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)? Yes = 1 No = 0	1
Total for D 5 Add the points in the boxes above	3
Rating of Landscape Potential If score is: X3 = H1 or 2 = M0 = L Record the rating on the	first page
D 6.0. Are the hydrologic functions provided by the site valuable to society?	-
D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met. The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): • Flooding occurs in a sub-basin that is immediately down-gradient of unit. points = 2 • Surface flooding problems are in a sub-basin farther down-gradient. points = 1 Flooding from groundwater is an issue in the sub-basin. points = 1 The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why points = 0	1
There are no problems with flooding downstream of the wetland. points = 0	
D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0	0
Total for D 6 Add the points in the boxes above	1

Rating of Value If score is: 2-4 = H $X_1 = M$ 0 = L

RIVERINE AND FRESHWATER TIDAL FRINGE WET	LANDS	
Water Quality Functions - Indicators that the site functions to imp	rove water quality	
R 1.0. Does the site have the potential to improve water quality?		
R 1.1. Area of surface depressions within the Riverine wetland that can trap sediments during a	flooding event:	
Depressions cover > 3/4 area of wetland	points = 8	
Depressions cover > ½ area of wetland	points = 4	
Depressions present but cover < ½ area of wetland	points = 2	
No depressions present	points = 0	
R 1.2. Structure of plants in the wetland (areas with >90% cover at person height, not Cowarding	n classes)	
Trees or shrubs $> \frac{2}{3}$ area of the wetland	points = 8	
Trees or shrubs $> \frac{1}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{2}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{1}{3}$ area of the wetland	points = 3	
Trees, shrubs, and ungrazed herbaceous $< \frac{1}{3}$ area of the wetland	points = 0

RIVERINE AND FRESHWATER TIDAL FR	INGE WETLANDS	
Hydrologic Functions - Indicators that site functions to reduce flooding and stream erosion		1
R 4.0. Does the site have the potential to reduce flooding and erosion?		
R 4.1. Characteristics of the overbank storage the wetland provides:		
Estimate the average width of the wetland perpendicular to the direction of	f the flow and the width of the	
stream or river channel (distance between banks). Calculate the ratio: (ave	erage width of wetland)/(average	
width of stream between banks).		
If the ratio is more than 20	points = 9	
If the ratio is 10-20	points = 6	
If the ratio is 5-<10	points = 4	
If the ratio is 1-<5	points = 2	
If the ratio is < 1	points = 1	
R 4.2. Characteristics of plants that slow down water velocities during floods: <i>Tre</i>		
shrub. Choose the points appropriate for the best description (polygons nee	ed to have >90% cover at person	
height. These are NOT Cowardin classes). Forest or shrub for $>^1/_3$ area OR emergent plants $>^2/_3$ area	noints - 7	
Forest or shrub for $> 1/10$ area OR emergent plants $> 1/10$ area	points = 7	
Plants do not meet above criteria	points = 4	
	points = 0	
	Add the points in the boxes above	
Rating of Site Potential If score is:12-16 = H6-11 = M0-5 = L	Record the rating on the	e first page
R 5.0. Does the landscape have the potential to support the hydrologic fur	nctions of the site?	
R 5.1. Is the stream or river adjacent to the wetland downcut?	Yes = 0 No = 1	
R 5.2. Does the up-gradient watershed include a UGA or incorporated area?	Yes = 1 No = 0	
R 5.3. Is the up-gradient stream or river controlled by dams?	Yes = 0 No = 1	
Total for R 5	Add the points in the boxes above	
Rating of Landscape Potential If score is:3 = H1 or 2 = M0 = L	Record the rating on the	e first page
R 6.0. Are the hydrologic functions provided by the site valuable to society	?	
R 6.1. Distance to the nearest areas downstream that have flooding problems? Choose the description that best fits the site.		
The sub-basin immediately down-gradient of the wetland has flooding prob	plems that result in damage to	
human or natural resources (e.g., houses or salmon redds)	points = 2	
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	
R 6.2. Has the site been identified as important for flood storage or flood conveya	nce in a regional flood control plan? Yes = 2 No = 0	
Total for R 6	Add the points in the boxes above	
Rating of Value If score is:2-4 = H1 = M0 = L	Record the rating on the	e first paae

<u>LAKE FRINGE WETLANDS</u>		
Water Quality Functions - Indicators that the site functions to imp	rove water quality	
L 1.0. Does the site have the potential to improve water quality?		
L 1.1. Average width of plants along the lakeshore (use polygons of Cowardin classes):		
Plants are more than 33 ft (10 m) wide	points = 6	
Plants are more than 16 ft (5 m) wide and <33 ft	points = 3	
Plants are more than 6 ft (2 m) wide and <16 ft	points = 1	
Plants are less than 6 ft wide	points = 0	
L 1.2. Characteristics of the plants in the wetland: Choose the appropriate description that resu	ılts in the highest	
points, and do not include any open water in your estimate of coverage. The herbaceous	s plants can be either	
the dominant form or as an understory in a shrub or forest community. These are not Co		
of cover is total cover in the unit, but it can be in patches. Herbaceous does not include ac	juatic bed.	
Cover of herbaceous plants is >90% of the vegetated area	points = 6	
Cover of herbaceous plants is $>^2/_3$ of the vegetated area	points = 4	
Cover of herbaceous plants is $>^1/_3$ of the vegetated area	points = 3	
Other plants that are not aquatic bed $> \frac{2}{3}$ unit	points = 3	
Other plants that are not aquatic bed in $> \frac{1}{3}$ vegetated area	points = 1

SLOPE WETLANDS	
Hydrologic Functions - Indicators that the site functions to reduce flooding and stream ero	sion
S 4.0. Does the site have the potential to reduce flooding and stream erosion?	
S 4.1. Characteristics of plants that reduce the velocity of surface flows during storms: Choose the points appropriate for the description that best fits conditions in the wetland. Stems of plants should be thick enough (usually > 1/8 in), or dense enough, to remain erect during surface flows. Dense, uncut, rigid plants cover > 90% of the area of the wetland All other conditions points = 0	
Rating of Site Potential If score is:1 = M0 = L Record the rating on	the first page
S 5.0. Does the landscape have the potential to support the hydrologic functions of the site?	
S 5.1. Is more than 25% of the area within 150 ft upslope of wetland in land uses or cover that generate excess surface runoff? Yes = $1 \text{ No} = 0$	
Rating of Landscape Potential If score is:1 = M0 = L	the first page
S 6.0. Are the hydrologic functions provided by the site valuable to society?	
S 6.1. Distance to the nearest areas downstream that have flooding problems: The sub-basin immediately down-gradient of site has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds) Surface flooding problems are in a sub-basin farther down-gradient No flooding problems anywhere downstream S 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0	
Total for S 6 Add the points in the boxes above	

NOTES and FIELD OBSERVATIONS:

Rating of Value If score is: ____2-4 = H ____1 = M ____0 = L

These questions apply to wetlands of all HGM classes. **HABITAT FUNCTIONS** - Indicators that site functions to provide important habitat H 1.0. Does the site have the potential to provide habitat? H 1.1. Structure of plant community: Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked. Aquatic bed 4 structures or more: points = 4 X Emergent 3 structures: points = 2 X Scrub-shrub (areas where shrubs have > 30% cover) 2 structures: points = 1 X_Forested (areas where trees have > 30% cover) 1 structure: points = 0 2 If the unit has a Forested class, check if: The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods). Permanently flooded or inundated 4 or more types present: points = 3 X Seasonally flooded or inundated 3 types present: points = 2 2 Occasionally flooded or inundated 2 types present: points = 1 X Saturated only 1 type present: points = 0 Permanently flowing stream or river in, or adjacent to, the wetland X Seasonally flowing stream in, or adjacent to, the wetland Lake Fringe wetland 2 points Freshwater tidal wetland 2 points H 1.3. Richness of plant species Count the number of plant species in the wetland that cover at least 10 ft². Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle If you counted: > 19 species points = 2 1 5 - 19 species points = 1 points = 0 < 5 species H 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. If you have four or more plant classes or three classes and open water, the rating is always high. 2 None = 0 points Moderate = 2 points Low = 1 point All three diagrams in this row are **HIGH** = 3points

	1
H 1.5. Special habitat features:	
Check the habitat features that are present in the wetland. The number of checks is the number of points.	
Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long).	
X_Standing snags (dbh > 4 in) within the wetland	
Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m)	
over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)	
Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree	
slope) OR signs of recent beaver activity are present (cut shrubs or trees that have not yet weathered	
where wood is exposed)	1
At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are	
permanently or seasonally inundated (structures for egg-laying by amphibians)	
Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of	
strata)	8
Total for H 1 Add the points in the boxes above	
Rating of Site Potential If score is:15-18 = H $\frac{X}{2}$ 7-14 = M0-6 = L Record the rating on the score is:15-18 = H $\frac{X}{2}$ 7-14 = M0-6 = L	the first page
H 2.0. Does the landscape have the potential to support the habitat functions of the site?	
H 2.1. Accessible habitat (include only habitat that directly abuts wetland unit).	
Calculate: % undisturbed habitat + [(% moderate and low intensity land uses)/2] =%	
If total accessible habitat is:	
$> \frac{1}{3}$ (33.3%) of 1 km Polygon points = 3	
20-33% of 1 km Polygon points = 2	1
10-19% of 1 km Polygon points = 1	-
< 10% of 1 km Polygon points = 0	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.	
· ·	
Calculate: % undisturbed habitat + [(% moderate and low intensity land uses)/2] =%	
Undisturbed habitat > 50% of Polygon points = 3	1
Undisturbed habitat 10-50% and in 1-3 patches points = 2	
Undisturbed habitat 10-50% and > 3 patches Points = 1	
Undisturbed habitat < 10% of 1 km Polygon points = 0	
H 2.3. Land use intensity in 1 km Polygon: If	-2
> 50% of 1 km Polygon is high intensity land use points = (-2)	-2
≤ 50% of 1 km Polygon is high intensity points = 0	
Total for H 2 Add the points in the boxes above	0
Rating of Landscape Potential If score is:4-6 = H1-3 = MX < 1 = L	ne first page
H 3.0. Is the habitat provided by the site valuable to society?	-
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score	
that applies to the wetland being rated.	
Site meets ANY of the following criteria: points = 2	
It has 3 or more priority habitats within 100 m (see next page)	
 It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) 	
It is mapped as a location for an individual WDFW priority species	
 It is a Wetland of High Conservation Value as determined by the Department of Natural Resources 	
 It has been categorized as an important habitat site in a local or regional comprehensive plan, in a 	
Shoreline Master Plan, or in a watershed plan	1
Site has 1 or 2 priority habitats (listed on next page) within 100 m	'
Site does not meet any of the criteria above points = 0	

Rating of Value If score is: 2 = H $X_1 = M$ 0 = L

WDFW Priority Habitats

<u>Priority habitats listed by WDFW</u> (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp. http://wdfw.wa.gov/publications/00165/wdfw00165.pdf or access the list from here: http://wdfw.wa.gov/conservation/phs/list/)

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: *NOTE:* This question is independent of the land use between the wetland unit and the priority habitat.

- **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- Old-growth/Mature forests: Old-growth west of Cascade crest Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 see web link above*).
- **Riparian**: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 see web link above*).
- **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report see web link on previous page*).
- **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 6.5 ft (0.15 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

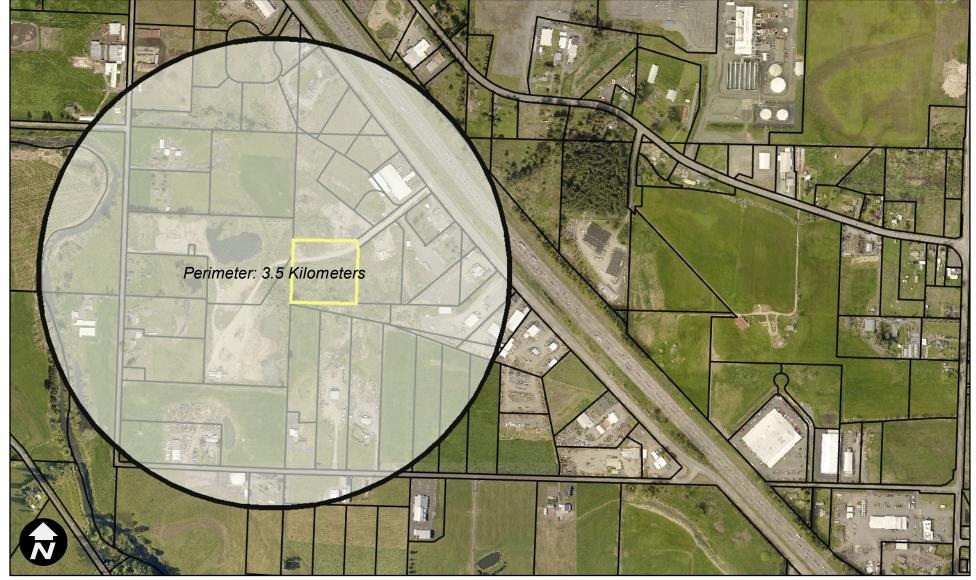

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS		
Wetland Type	Category	
Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.		
SC 1.0. Estuarine wetlands		
Does the wetland meet the following criteria for Estuarine wetlands?		
— The dominant water regime is tidal,		
— Vegetated, and		
— With a salinity greater than 0.5 ppt Yes –Go to SC 1.1 No= Not an estuarine wetland		
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area		
Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151		
Yes = Category I No - Go to SC 1.2	Cat. I	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions?		
— The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less	6-4-1	
than 10% cover of non-native plant species. (If non-native species are Spartina, see page 25)	Cat. I	
— At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-		
mowed grassland.	Cat. II	
— The wetland has at least two of the following features: tidal channels, depressions with open water, or	Cat. II	
contiguous freshwater wetlands. Yes = Category I No = Category II		
SC 2.0. Wetlands of High Conservation Value (WHCV)		
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High		
Conservation Value? Yes – Go to SC 2.2 No – Go to SC 2.3	Cat. I	
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value?		
Yes = Category I No = Not a WHCV		
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland?		
http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf		
Yes – Contact WNHP/WDNR and go to SC 2.4 No = Not a WHCV		
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on		
their website? Yes = Category I No = Not a WHCV		
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key</i>		
below. If you answer YES you will still need to rate the wetland based on its functions.	'	
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or		
more of the first 32 in of the soil profile? Yes – Go to SC 3.3 No – Go to SC 3.2		
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep		
over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or		
pond? Yes – Go to SC 3.3 No = Is not a bog		
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30%		
cover of plant species listed in Table 4? Yes = Is a Category I bog No - Go to SC 3.4		
NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by	/	
measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the		
plant species in Table 4 are present, the wetland is a bog.	Cat. I	
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar,		
western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the		
species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?		
Yes = Is a Category I bog No = Is not a bog		

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? If you answer YES you will still need to rate the wetland based on its functions. — Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. — Mature forests (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = Category I No = Not a forested wetland for this section SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? — The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks — The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the bottom) Yes - Go to SC 5.1 No = Not a wetland in a coastal lagoon SC 5.1. Does the wetland meet all of the following three conditions? — The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). — At least % of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un- mowed grassland. — The wetland is larger than \(^1\)_{10} ac (4350 ft^2) Yes = Category I No = Category II SC 6.0. Interdunal Wetlands Is the wetland tased to the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? If you answer yes you will still need to rate the wetland	
the wetland based on its functions. Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = Category I No = Not a forested wetland for this section Obes the wetland sin Coastal Lagoons Does the wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the bottom) Yes - Go to SC 5.1 No = Not a wetland in a coastal lagoon CC 5.1. Does the wetland meet all of the following three conditions? The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. The wetland is larger than ½ (a (4350 ft²)) Yes = Category I No = Category II Ocean Shores-Copalis: Lands west of SR 103 Grayland-Westport: Lands west of SR 105 Ocean Shores-Copalis: Lands west of SR 105 The wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)? Yes - Category I No - Go to SC 6.2 Is the wetland 1 ac o	
canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. — Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = Category I No = Not a forested wetland for this section C 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? — The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks — The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the bottom) Yes — Go to SC 5.1 No = Not a wetland in a coastal lagoon C 5.1. Does the wetland meet all of the following three conditions? — The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). — At least ¼ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. — The wetland is larger than $^1/_{10}$ ac (4350 ft²) Yes = Category I No = Category II C 6.0. MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24.000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Lewis County Area, Washington Survey Area Data: Version 21, Aug 31, 2021

Soil map units are labeled (as space allows) for map scales 1:50.000 or larger.

Date(s) aerial images were photographed: Nov 21, 2021—Nov 22, 2021

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
1	Alvor silty clay loam	4.4	5.8%
48	Chehalis silty clay	12.4	16.3%
61	Cloquato silt loam	3.0	4.0%
118	Lacamas silt loam, 0 to 3 percent slopes	25.2	33.1%
152	Olequa silt loam, 0 to 5 percent slopes	5.2	6.8%
166	Pits	0.9	1.2%
172	Reed silty clay loam	20.0	26.4%
173	Reed silty clay loam, channeled	4.8	6.3%
Totals for Area of Interest		76.0	100.0%

Critical Area Qualifications for Robert Russell

Formal Education

1976-1980	BS General Chemistry - Oregon State University
1980-1982	Graduate Work in Synthetic Organic Chemistry - Oregon State University
1990-1992	MS Aeronautical Engineering - Naval Postgraduate School
1997-2018	Technical Association of the Pulp and Paper Industry

Environmental Training

2007-2022	Lewis County Landowner with forest land, wetlands, riparian area, and Salmon.
Mar 2018	Completed Army Corp of Engineers Wetland Delineation Training Program.
Mar 2019	Completed 2014 WA State Wetland Rating System Training.
July 2019	Complete Forest Stewardship Training with WA State Extension Service.
June 2019	First Wetland delineations submitted and accepted by County Planning Dept.
	Have since had reports approved by the Cities of Centralia and Chehalis.
Sept 2019	Completed Grass, Sedge, and Rush Identification with Coastal Training Program.

Technical and Professional Organizations

1997-2018	Technical Association of the Pulp and Paper Industr	v
1331-2010		v

2021-present Lewis County representative to the Chehalis Basin Habitat Work Group.

2021-present Lewis County Planning Commission

2022-present Board member of the Coast Salmon Partnership

Richard Chinn Environmental Training, Inc.

certifies that

Robert Russell

has successfully completed a

38 Hour Army Corps of Engineers Wetland Delineation Training Program

issued Certificate No. 8340 and 3.8 CEUs, March 5 - 8, 2018, in Seattle, Washington
This course is pre-approved by the Society of Wetland Scientists Professional Certification Program to provide 2.5 Training Credits and/or Points.

Richard Chinn Environmental Training, Inc. 804 Cottage Hill Way, Brandon, FL 33511-8098

813.655.7549 • FAX: 813.354.4659 • info@richardchinn.com • http://www.richardchinn.com

This training has been based in part on the U. S. Army Corps of Engineers Wetlands Delineation Manual Technical Report Y-87-1 (1987 manual), as provided for in the training materials developed in conjunction with Section 307(e) of the Water Resources Development

Act of 1990 for the Wetland Delineator Certification Program.

Certificate of Completion

"Using the Revised Washington State Wetland Rating System (2014) in Western Washington"

Instructors: Amy Yahnke, Zach Meyer

March 20-21, 2019, Lacey - 12 Hours

This Certificate is awarded to

Robert Russell

3/22/19

M. Cathy Angell, Coastal Training Program Coordinator
