Chehalis, WA 98532

Re: Hampe Way Multifamily – Chehalis
Transportation Impact Analysis

Dear Mr. Balmelli,

I am pleased to present this Transportation Impact Analysis for a development of an 86 unit apartment complex with 195 parking stalls and 5,600 sf commercial building with 18 parking stalls added to the existing commercial parking area containing 93 stalls. The site is generally located on the east side of NE Kresky Ave. at the NE Hampe Way alignment. Access to the site is driveways off of NE Hampe Way. The proposal also re-aligns NE Sky Lane access to NE Kresky Ave. adjacent to NE Hampe Way to access NE Hampe Way east of NE Kresky Way.

Chehalis Municipal Code Section 12.04.330.B.2 requires the preparation of a Traffic Impact Analysis be conducted for projects that generate 10 or more PM peak hour trips within an existing or proposed Transportation Benefit District. Per CMC 3.11.010 the Chehalis Transportation Benefit District's geographic boundaries are comprised of the corporate limits of the City of Chehalis. The following intersections (classified and and the NE Hampe Way) in the City that are projected to be affected by 10 or more peak hour peak direction trips are studied in this report:

1. N. National Ave. at NE Hampe Way
2. NE Kresky Ave. at NE Hampe Way
3. N. National Ave. at Coal Creek Rd.
4. NW Chamber of Commerce Way at N. National Ave.

I have inspected the site and surrounding street system. The general format of this report is to describe the proposed project, identify existing traffic conditions (baseline), project future traffic conditions and identify Agency street/road improvements (future baseline), calculate the traffic that would be generated by the project and then add it to the future baseline traffic volumes. Operational analyses are used to determine the specific project traffic impact and appropriate traffic mitigation measures to reduce the impact.

The **SUMMARY, CONCLUSIONS AND RECOMMENDATIONS** are on page 11 of this report.
PROJECT INFORMATION

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -2-

Figure 1 is a vicinity map which shows the location of the site and the surrounding street system.

Figure 2 shows the Preliminary Site Plan prepared by RB Engineering, Inc. dated 08.04.2023 is attached. The plan depicts a development of an 86 unit apartment complex in six buildings, a 5,600 sf office building and three storm ponds. Also shown are 195 residential parking stalls including 11 accessible, 111 commercial parking stalls including the existing commercial stalls and the site access and circulation. Access to the site is driveways off of NE Hampe Way. The site also re-aligns NE Sky Lane access to NE Kresky Ave. adjacent to NE Hampe Way to access NE Hampe Way east of NE Kresky Way.

Full development and occupancy of the proposed Hampe Way Multifamily project is anticipated to occur by 2024/2025, presuming the permits are issued in a timely manner. However, to ensure a conservative analysis 2028 has been used as the horizon year.

EXISTING ENVIRONMENT

Project Site

An aerial image, augmented, of the project site obtained from Lewis County GIS is depicted below.

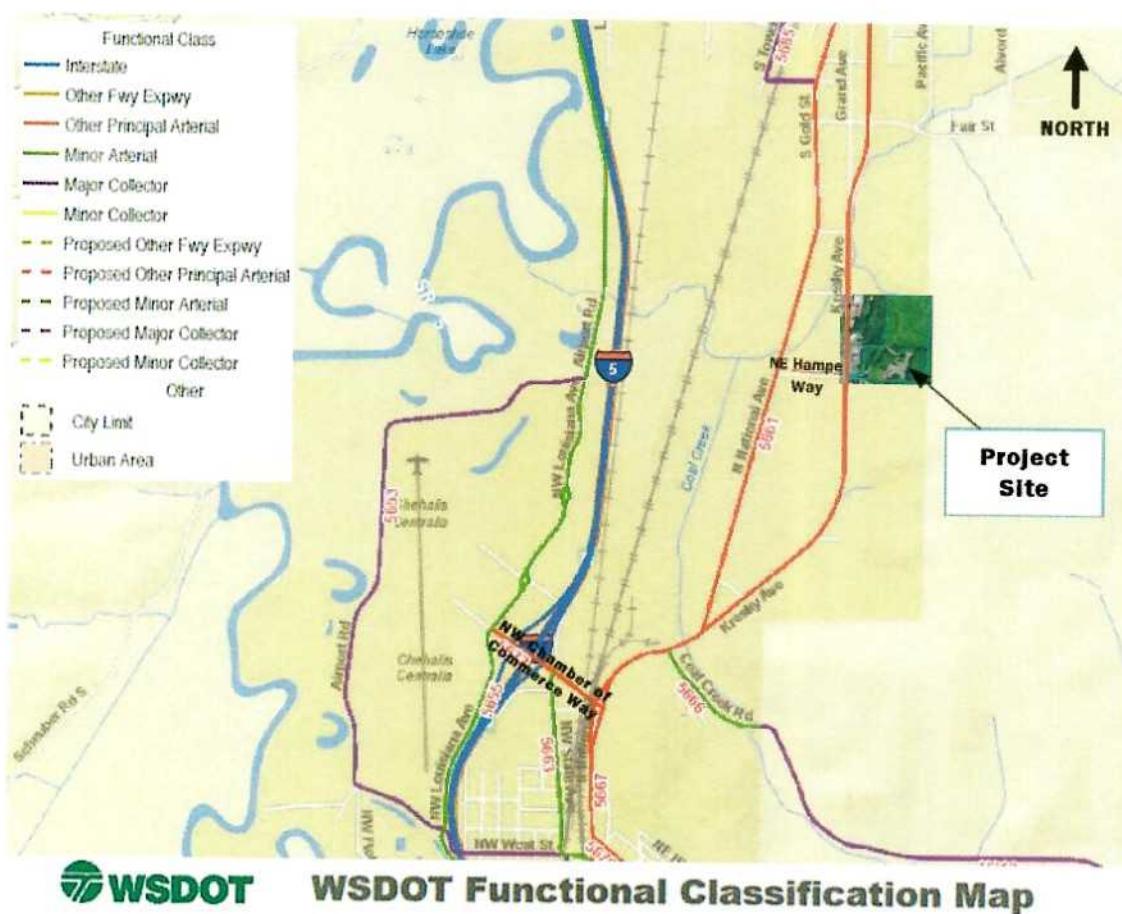

The site is Lewis County parcel #021630003000 and 021629002000. The south parcel is currently developed with a commercial office building to remain.

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -3-

Street System

I understand that the City follows the WSDOT Functional Classification Map, the pertinent section of the WSDOT map is below:

The primary streets within the study area and their classifications are as follows (streets near the site):

- NE Kresky Ave. Principal Arterial
 - N. National Ave.-S. Gold St. Principal Arterial
 - NW Chamber of Commerce Way Principal Arterial
 - Coal Creek Rd. Minor Arterial/Major Collector

Northeast Hampe Way is not classified per the WSDOT Functional Classification Map. The street is striped with yellow centerline striping that typically depicts that a street functions as a Neighborhood Collector; and is consistent with my Traffic Engineering inspection.

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -4-

Figure 3 shows the existing traffic control, number of street lanes, number of approach lanes at intersections and other pertinent information.

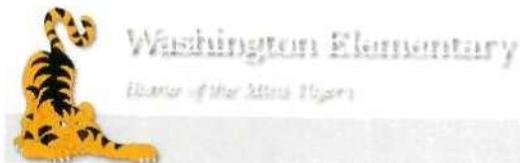

Pedestrian Facilities (General)

Paved shoulders (~5 with some wider sections) exist on both sides NE Kresky Avenue. Northeast Hampe Way west of NE Kresky Ave also has paved shoulders of about five feet on both sides.

Schools

Correspondence with the Chehalis School District identified that the students living in Hampe Way Multifamily would attend schools in the Centralia School District. The Centralia School District online information, <https://www.centraliaschooldistrict.org/> and correspondence indicates that students living in Hampe Way Multifamily facility would primarily attend the following schools

Washington Elementary School (K, 1-6)
800 Field Street Centralia,
WA 98531
1-360-330-7641

Centralia Middle School (7-8)
901 Johnson Road
Centralia, WA 98531
1-360-330-7619

Centralia High School (9-12)
813 Eshom Road
Centralia, WA 98531
1-360-330-7605

Students attending the above schools would be provided school bus transportation. The pick up and drop off location would need to be determined in the future.

Alternative Transportation

The City of Chehalis is served by Twin Transit; Chehalis **Red** and Centralia-Chehalis Express **Yellow**. In addition, the site is located in a Dial-a-Ride Twin Transit (DARTT) Zone.

RB ENGINEERING
 Attn: Robert Balmelli, PE
 August 15, 2023
 Page -5-

More information on Transit Service is available at <https://twintransit.org/routes/>

Traffic Volumes

Figure 4 shows the baseline PM peak hour traffic volumes at the study intersections. Traffic Count Consultants, a firm specializing in the collection of traffic data, conducted PM peak period turning movement counts at the study intersections. The count data sheets are attached in the appendix.

Intersection Operations

Traffic engineers have developed criteria for intersection operations called level of service (LOS). The LOS's are A to F with A and B being very good and E and F being more congested. LOS C and D correlate to busy traffic conditions with some restrictions to the ability to choose travel speed, change lanes and the general convenience comfort and safety.

The procedures in the Transportation Research Board [Highway Capacity Manual](#), HC6 were used to calculate the level of service at the study intersections. The following table depicts the LOS and corresponding average delay in seconds at signalized and stop control intersections:

Intersection Type	Level of Service					
	A	B	C	D	E	F
Signalized	<10	>10 and <20	>20 and <35	>35 and <55	>55 and <80	>80
Stop Control	<10	>10 and <15	>15 and <25	>25 and <35	>35 and <50	>50

LOS Analysis Software

The LOS of the study intersections were calculated using the Synchro software program (v11). Table 1, at the end of report prior to Figure, shows the existing LOS operations of the study intersections.

RB ENGINEERING
 Attn: Robert Balmelli, PE
 August 15, 2023
 Page -6-

LOS Criteria

The City of Chehalis Municipal Code Section 12.04.330 subsection J.1 below identifies the City's operational standard at LOS C.

J. Mitigation.

1. The TIA will include a proposed mitigation plan. The mitigation may be either the construction of necessary transportation improvements or contributions to the city for the proposed project's fair share cost of identified future transportation improvements, as identified in the city's comprehensive plan. Levels of service "E" and "F" will be used as the threshold for determining appropriate mitigating measures on roadways and intersections in the study area. Mitigating measures will be required to the extent that the transportation facilities operate at a LOS "C" (LOS-C) condition or better upon completion of the development.

Incident/Safety History

Incident data was reviewed using the WSDOT accident data portal available online at <https://remoteapps.wsdot.wa.gov/highwaysafety/collision/data/portal/public/>. This portal was used to review incidents in the site vicinity for the years 2018 to 2022. The WSDOT data is attached.

Table 2 identifies the calculated accident rates at the study intersections for the five year time period 2018 to 2022.. The rates were determined per million entering vehicles using a "k" factor of 10 that is that about 10% of the daily traffic occurs during the PM peak hour.

Intersection	Incident Severity					Total Incidents (5years)	Entering PMPHT	Accident Rate	Comments
	A	B	C	D	E				
1. N. National Ave./NE Hampe Way.	0	1	0	0	0	1	860	0.1	-
2. NE Kresky Ave./NE Hampe Way	2	2	1	0	0	5	745	0.4	-
3. N. National Ave./Coal Creek Rd.	3	0	0	0	0	3	1,625	0.1	-
4. NW Chamber of Commerce Way/N. National Ave.	7	1	2	0	0	10	1,552	0.4	-

A - Property Damage; B - Possible Injury; C - Suspected Minor Injury; D - Suspected Serious Injury; E - Fatality
 Accident rate per million entering vehicles

Accident rates of less than 1 per million entering vehicles at intersections typically indicate that the intersection is operating satisfactorily. The study intersections operate satisfactorily with no apparent issue.

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -7-

INFRASTRUCTURE IMPROVEMENT PROJECTS

I have reviewed the City of Chehalis Six Year Transportation Improvement Program 2023 to 2028 for transportation projects near the site, copy attached. Nearby projects are:

- Chamber Way Bridge Replacement. The start date is 2023 with construction in 2035 and the budget is \$33,850,000.
- National Ave. at Coal Creek to reconstruct the Coal Creek Bridge and provide intersection/pedestrian improvements. The start year is 2026 and is budgeted at \$2,700,000.

HORIZON YEAR CONDITIONS “WITHOUT” THE PROJECT

Figure 5 shows the projected 2028 PM peak hour traffic volumes “without” the project. These volumes include the existing traffic volume counts plus background growth. I have applied a 2% per year growth rate consistent with my recent traffic work in the City, the WSDOT data noted below for SR – 5 in Lewis County and past work in the City.

TRIP GENERATION AND DISTRIBUTION

Definitions

A vehicle trip is defined as a single or one direction vehicle movement with either the origin or destination (exiting or entering) inside the proposed development.

Traffic generated by development projects consists of the following types:

- | | |
|----------------------|---|
| Pass-By Trips: | Trips made as intermediate stops on the way from an origin to a primary trip destination. |
| Diverted Link Trips: | Trips attracted from the traffic volume on a roadway within the vicinity of the generator but which require a diversion from that roadway to another roadway in order to gain access to the site. |
| Captured Trips: | Site trips shared by more than one land use in a multi-use development. |

RB ENGINEERING
 Attn: Robert Balmelli, PE
 August 15, 2023
 Page -8-

Primary (New) Trips: Trips made for the specific purpose of using the services of the project.

Trip Generation

The proposed Hampe Way Multifamily project is expected to generate the vehicular trips during the average weekday, street traffic AM and PM peak hours as shown in Table 3. The trip generation for the project is calculated using trip rates from the Institute of Transportation Engineers (ITE) Trip Generation, 11th Edition, for the Multi-Family Housing and Small Office Building (ITE Land Use Codes 220 and 712, respectively). All site trips made by all vehicles for all purposes, including commuter, visitor, and service and delivery vehicle trips are included in the trip generation values.

TABLE 3 - VEHICULAR TRIP GENERATION HAMPE WAY MULTIFAMILY - CHEHALIS TRANSPORTATION IMPACT ANALYSIS										
Time Period	Size (X)	TG Rate	Enter %	Enter Trips	Exit %	Exit Trips	Total (T)	Pass-by %*	Pass-by Trips	Net Total
Proposed: Multi-Family Housing (Low-Rise) - General Urban/Suburban (ITE LUC 220; 86-units)										
Weekday	86	6.74	50%	290	50%	290	580	-	--	--
AM peak hour	86	0.4	24%	8	76%	26	34	-	--	--
PM peak hour	86	0.51	63%	28	37%	16	44	-	--	--
Proposed: Small Office Building (ITE LUC 712; 5,600 sf)										
Weekday	5,600	14.39	50%	40	50%	40	81	-	--	--
AM peak hour	5,600	1.67	82%	8	18%	2	9	-	--	--
PM peak hour	5,600	2.16	34%	4	66%	8	12	-	--	--
Total: Residential + Commercial										
Weekday	-	--	--	330	-	330	660	-	--	--
AM peak hour	-	--	--	16	-	28	44	-	--	--
PM peak hour	-	--	--	32	-	24	56	-	--	--

Where X = number of units or sf and T = Trips

* - Pass-by rates per ITE, local Agency data and Traffic Engineering Experience, residential trips are typically considered new thus for analysis no pass-by to account for service/delivery type trips is taken

Trip rates per the Institute of Transportation Engineers Trip Generation Manual 11th Edition

Note: Due to rounding some values may not add up

The new traffic associated with the Hampe Way Multifamily is 56 PM peak hour trips with 32 entering and 24 exiting.

Trip Distribution

Figure 6 shows the site generated traffic assigned to the street system. Trips to and from the site were distributed to the surrounding street network based on the characteristics of the network, existing traffic volume patterns and the location of likely trip origins and destinations (residential, business, shopping, social and recreational opportunities).

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -9-

HORIZON YEAR CONDITIONS "WITH" THE PROJECT

Traffic Volumes

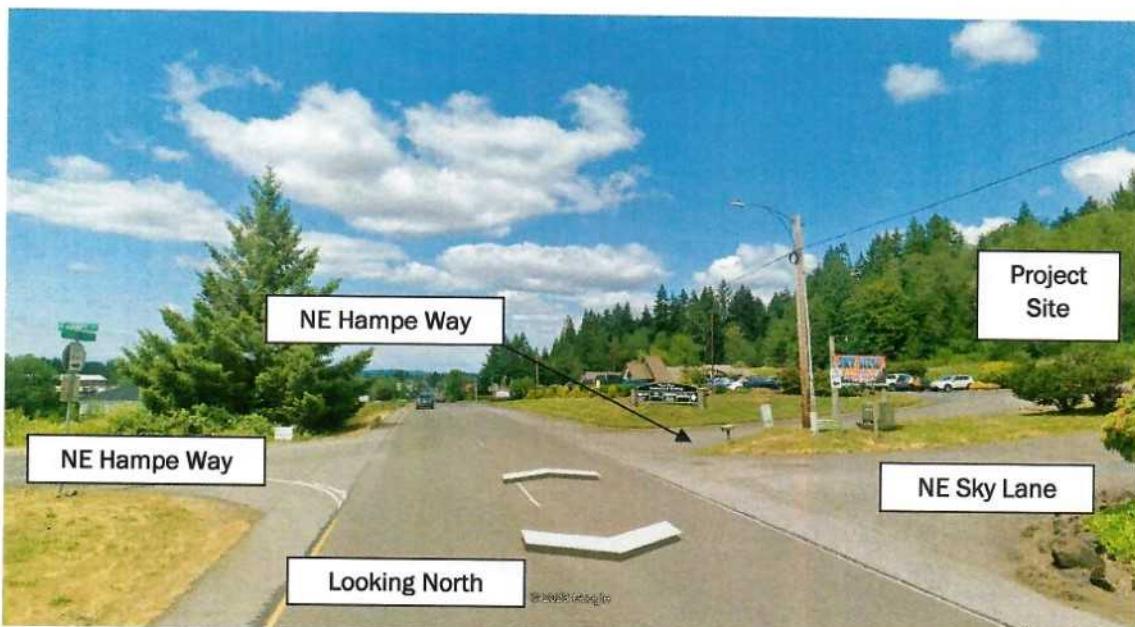

Figure 7 shows the projected 2028 PM peak hour traffic volumes "with" the proposed project at the analysis and site access intersections. The site generated PM peak hour traffic volumes shown on Figure 6 were added to the projected background traffic volumes shown on Figure 5 to obtain the Figure 7 volumes.

Level of Service

Table 1 shows the calculated LOS for the horizon year (2028) "with" and "without" project conditions at the analysis intersections. Based on my operational analysis the analyzed intersections would continue to operate at LOS 'C' or better for both "with" and "without" project conditions that exceeds the City criteria.

SITE ACCESS INSPECTION

I have inspected the site, the site access and the streets in the site vicinity. Access to the site would be driveways constructed to City standards on NE Hampe Way. Below are Bing Google Street View photographs looking to the north and south, respectively at the NE Hampe Way access with NE Kresky Avenue:

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -10-

The required Stopping Sight Distance for a 35 MPH speed per the American Association of State Highway and Transportation Officials "A Policy on Geometric Design of Highways and Streets" is 250'. The Entering Sight Distance is 335 and 390 feet for a right turn/crossing and left turn from a stop, respectively. AASHTO identifies SSD as the critical sight line to be provided, see Section 9.5.1 attached in the Appendix.

Parked vehicles, signage and vegetation can affect sight lines. Appropriate vehicular, signage and vegetation restriction within the site access sight triangle is recommended. Per the Google Street View appropriate sight lines would be available for the proposed site accesses.

The project proposal includes relocating the NE Sky Lane access to the east and re-aligning the east leg of NE Hampe Way to align with the west leg. This change is expected to improve the operation and safety of the intersection by removing conflicting movements.

PARKING INSPECTION

The project includes 195 parking stalls that correlate into 2.2 stall unit. Chehalis Municipal Code parking requirement per Chapter 17.84 PARKING AND LOADING identifies for use code R121 Apartments that two parking stalls per unit be provided. The proposed project provides the City code required parking.

The proposed 195 residential parking stalls and 111 (18 new + 93 existing) commercial stalls are ample for the project.

RB ENGINEERING
Attn: Robert Balmelli, PE
August 15, 2023
Page -11-

AGENCY TRAFFIC IMPACT MITIGATION REQUIREMENTS

The City will require that the project site access and circulation be constructed in conformance to City requirements. Additionally, street frontage improvements to City requirements are required.

SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

This report analyzed the traffic and parking impact of the proposed of a 96 unit apartment complex with 195 parking stalls and 5,600 sf commercial building with 18 added parking stalls to the existing 93 stalls. The site is generally located on the east side of NE Kresky Ave. at the NE Hampe Way alignment. Access to the site is driveways off of NE Hampe Way. The proposal also re-aligns NE Sky Lane access to NE Kresky Ave. adjacent to NE Hampe Way to access NE Hampe Way east of NE Kresky Way.

Existing traffic data was obtained at the street intersections identified for analysis. Future horizon year traffic volumes were derived using a growth factor of two percent per year. Level of service analyses were performed for existing and projected future horizon traffic volumes during the PM peak hour. The evaluation of the traffic impact of the proposed project included adding project generated traffic to the future traffic volume projections and calculating the level of service. The "with" project traffic operations were then compared to the "without" project operations. The comparison of traffic operations "with" and "without" the project identified that the project would not cause a significant adverse affect on the operation of the study intersections. In addition, sight lines and safety inspection were conducted at the study intersections and no apparent deficiencies were noted.

Based on my analysis I recommend that Hampe Way Multifamily be allowed with the following traffic impact mitigation measures.

- Construct site in accordance with applicable City requirements.

If you have any questions you can contact me at 206.762.1978 or email me at jaketraffic@comcast.com.

Very truly yours,

Mark J. Jacobs, PE, PTOE, President
